Issue 1, January 2022

## We are now open to recruitment!

### Randomisations per site

Bristol Royal Hospital for Children	6
Great Ormond Street Hospital	4
Royal Manchester Children's Hospital	4
Addenbrooke's Hospital	3
The Royal London Hospital	2
Noah's Ark Children's Hospital for Wales	2
St Mary's Hospital London	1
Alder Hey Children's Hospital	1

### Key achievements

- We are now entering our 3<sup>rd</sup> month of recruitment and have 8 sites open across England and Wales.
- Congratulations to the team at **Bristol Royal Hospital for Children** for randomising the first patient into the PRESSURE trial and being our top recruiter.
- As of 17 January 2022, we have **over 22 patients** randomised into the trial. Thank you everyone for your hard work!
- A warm welcome to the team at **Alder Hey Children's Hospital** – our latest site, and best of luck with the trial.

### Screening & enrolment reminder

- The starting point for the screening process is **patients accepted for / admitted to PICU and on vasoactive drugs**.
- Patients can be screened and become eligible **at any point during their critical care stay**, even if vasoactives start after admission.
- To facilitate the screening & enrolment process, we have developed **flowcharts for site and retrieval teams**. These can be found under the *Training* section of our webpage.
- Remember to **complete and submit your screening logs regularly** to ensure efficient trial monitoring. *Do not forget that we now have an updated, simplified version of the screening log - V2.0.*

### Permissive PRESSURE targets

Age range (completed months/years)	Target range (mmHG)
Less than 6 months	40 – 43
6 months – Less than 1 year	40 – 45
1 – 3 years	45 – 50
4–9 years	50 – 55
≥ 10 years	55 – 60
