

Dash to the finishing line!

Over **1,300** patients have now been recruited to the **POPPI trial**.

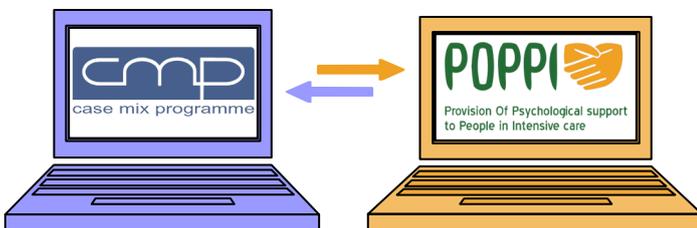

November was a good month for recruitment (with **95** patients) -
so let's see if we can do the same for the final two months!

Thank you all for your support in keeping recruitment open at your site
to help ensure we are all delivering the best POPPI trial possible.

CMP data linkage

We need to ensure that data collected for POPPI can be linked to data in the Case Mix Programme (CMP) database for the analysis.

We will be contacting you if we find any discrepancies in the data between the POPPI and CMP databases, for your help to identify and correct any errors ahead of the POPPI database lock next year. Please liaise with your local CMP audit colleagues in ensuring both databases are correct.

Dates for your diary

5 - 7 December 2016
ICS State of the Art Meeting
London

Come and say hello to the CTU team
at the ICNARC stand!

Message from the Chief Investigator

I just wanted to take this opportunity to thank you all for your commitment to the POPPI cluster randomised clinical trial (cRCT).

The POPPI cRCT is the first, large, multicentre cRCT evaluating a complex intervention commencing in the critical care unit and aimed at reducing longer-term psychological morbidity (post-traumatic stress symptom severity) for critical care survivors in the UK.

As I'm sure you are aware, the results from our collaborative efforts are eagerly awaited, both nationally and internationally, and have the potential to inform both clinical practice and the future research agenda in this very important, patient-centred area of research. Your dedication to completing the POPPI trial makes all the difference...

My very best wishes
Kathy
Chief Investigator, POPPI
