UK-ROX officially opened for recruitment on 3 May 2021. Congratulations to the team at Musgrove Park Hospital for randomising the first UK-ROX patient and Grange University Hospital for randomising the 500th. A big thank you to all the sites that have opened so far and who have worked incredibly hard to recruit 500 patients!

We are also pleased to now be registered for the NIHR Associate PI Scheme. For more information, please visit: https://www.nihr.ac.uk/documents/associate-principal-investigator-pi-scheme/25040

Joining the herd

- 19 Site Initiation Visits have been carried out on Teams/Zoom, involving 65 sites.
- 51 sites have confirmed capacity and capability.
- 49 sites are open to recruitment (see map below) and 47 sites have recruited their first patient! We look forward to welcoming many more sites in the coming months.

King’s of the jungle

1. Sunderland Royal Hospital
2. Royal Devon and Exeter Hospital
3. Tunbridge Wells Hospital
4. Derriford Hospital
5. Royal Cornwall Hospital
5. University Hospital Coventry
5. Queen Alexandra Hospital

Earn your stripes

- In the conservative oxygen group, the lowest concentration of oxygen possible should be administered to maintain SpO2 at 90 (±2)%.
- The intervention continues until discharge from your ICU or 90 days after randomisation (whichever is sooner). If a patient is readmitted, the intervention should be recommenced.
- The intervention applies at any point supplemental oxygen is required, including after extubation and regardless of the modality of oxygen therapy (e.g. CPAP, HFNC, face mask).
- Please add patients to the trial database in a timely manner, as this is very important for trial monitoring.
- Reminder that the Screening Log records all patients receiving mechanical ventilation (MV) following an unplanned ICU admission OR where MV was started in ICU.
