

Improving intensive care...

...learning from experience for the
benefit of future patients.

This intensive care unit participates in a national audit called the Case Mix Programme.

This audit provides feedback on treatments and results to help this unit make the best decisions about treating future patients.

Staff collect information on treatment and results for every patient admitted to this unit. These data are then analysed by an independent organisation.

**This intensive care unit
uses the results of the audit
to help improve care for all patients.**

Further information can be found in the leaflets available from any member of the health care team in this unit.
