

# CMP Software Developers

There are **two** types of software products to choose from:

## Commercial software developers

---

- Private company providing local data collection systems to critical care units for a profit.
- will usually provide a maintenance, support service and software updates as needed.
- are likely to have a regional or national coverage.
- are likely to use more up-to-date technologies and may provide additional functionality to enable the collection of other related data or a link to other hospital systems.

## Non-commercial software developers

---

- Hospital/Trust/Network based individual/organisation providing local data collection solutions to local critical care units at cost/for free.
- may provide a maintenance and support service.
- may be limited to specific geographical area.
- may offer additional functions.

## Advice for units

---

ICNARC recommends that when choosing the appropriate software units should:

- find out whether costs are annual or 'once-only' and if these cover support and maintenance;
- ask prospective software suppliers to demonstrate the software to unit staff (particularly the data collector);
- discuss the proposed software choice with the Trust IT department;
- ensure the software has passed ICNARC's rigorous compliance testing process; and
- ask other units who already use the proposed software solution how they find its use and application (where relevant).

**A full list of CMP compliant and registered software developers and their contact details are provided overleaf.**

# CMP compliant software developers

CMP compliant software developers provide software that meets strict CMP dataset technical specifications and that have been deemed as 'CMP compliant'.

## CMP registered software developers (non-compliant)

---

Registered software developers have been granted access to the full complement of dataset specification documents required to develop CMP-compliant software, but have either:

- not yet submitted test data (i.e. non-active); or
- submitted test data, but are currently in testing phase.

ICNARC will **not** accept data submission from units using non-CMP compliant software unless submitted as a pre-agreed 'test file'.

## CMP registered software developers (developing software)

- not yet submitted test data (i.e. non-active).
