

Finish what you started

The sun is starting to set on Oxy-PICU - our target is to reach 120, as of 13th June we have 105 patients. Can we meet the target before festival season begins?!

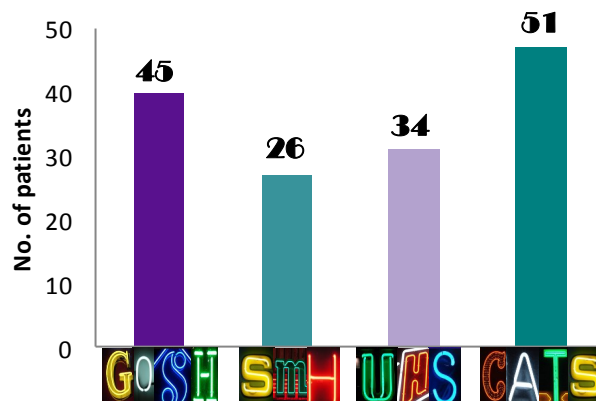

As we reach the end of the road, please make sure your data is entered on to MACRO so we can start analysis as soon as possible.

Thank you so much for your hard work so far.

Line-up

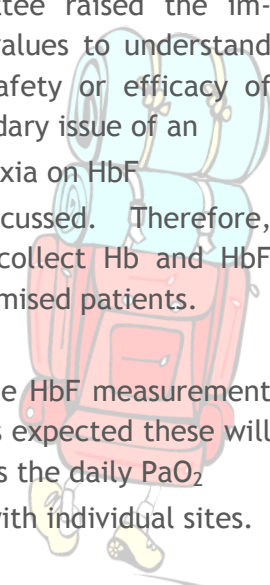

Recruitment headliners

Latecomers

The Trial Steering Committee raised the importance of collecting Hb values to understand any interaction with the safety or efficacy of permissive hypoxia. A secondary issue of an influence of permissive hypoxia on HbF measurements was also discussed. Therefore, we will be asking you to collect Hb and HbF measurements for all randomised patients.

Please enter one Hb and one HbF measurement per day for all patients. It is expected these will be taken at the same time as the daily PaO₂ values, but we will discuss with individual sites.

Foxy-PICU's to-do list

- June - Finish recruitment
- July - Complete data entry & data validation
- Late July - Database lock
- August - Analysis; TSC & DMEC meetings
- September - Feedback meeting
- Late September - Sun, sea, sand

We will let you know as soon as the web portal has been updated. Until then, please feel free to record values on paper CRFs or an Excel spreadsheet.
